VI–3 Solving Linear Equations with Models

Name:_____
Date: _____ Per: ___

Notes

Small cubes of the same weight and bags with an equal number of cubes in them are placed on a scale as shown.

1) Assuming the scale is balanced, use the diagram to determine how many cubes must be in each bag.

For problems 3 & 4, model the problem using bags and cubes.

3) 3 bags are on one side of the scale, 12 cubes are on the other side.

4) 2 bags and 4 cubes are on side of the scale and 10 cubes are on the other side.

5) Write equations that could have been used to represent the scales on 3 and 4.

#3: #4:

6) Use inverse operations to solve #4.
