HW SoL: VII - 1 Worksheet

1) x = -5
2) x = 3
3) x = 6
4) x = 2
5) x = 7
6) x = 18/5 or 3 ⅗
7) x = 0
8) x = -2
9) x = -4
10) x = 6
11) x = ½
12) x = -3

Announcements

- 10/30 → CC 8: The OCHO
  - IV) Exponent Properties (Try 4)
  - V) Scientific Notation (Try 3)
  - VI) Patterns and Modeling (Try 2)
  - VII) Solving Linear Equations (Try 1)

- I will be checking each day to see if you have your homework done on its due date. If you do not have it, you will become a member of the WRMS LBC after 2 strikes.

- Reminders
  - You need to model your practice as it is done in class
  - You need to study from your previous concept checks

VII - 2 Linear Equations: No / Infinite Solutions

Imagine a balanced scale with 3 bags and 2 cubes on one side, and 3 bags and 2 cubes on the Other. Model it.

Describe steps to determine how many cubes each bag has.

NOT POSSIBLE

Imagine a balanced scale with 1 bag and 5 cubes on one side, and 1 bags and 2 cubes on the Other. Model it.

Describe steps to determine how many cubes each bag has.

- Remove Bags
- Doesn't work

of Solutions

one: Solve, get x = #

None: Solve
Variables Eliminated
False statement

Infinite: Solve
Variables Eliminated
True Statement

1) $8 + 5(x - 2) = 2x - 2 + 3x$

$8 + 5x - 10 = 2x - 2 + 3x$

$5x - 2 = 5x - 2$

$-5x \quad -5x$

$-2 = -2$

TRUE!

INFINITE SOLUTIONS

2) $8x - 4 - 2x = 3(2x - 1)$

$8x - 4 - 2x = 6x - 3$

$6x - 4 = 6x - 3$

$-6x \qquad -6x$

$-4 = -3$

FALSE!

NO SOLUTION

3) $2(3x + 1) = 3x + 1 + 3x$

$6x+2 = 6x+1$

$-6x \qquad -6x$

$2 = 1$

False!

NO SOL

4) $6x + 10 = 10 - 2x + 10x$

$6x+10=10+8x$

$-8x \qquad -8x$

$-2x+10=10$

$-10 \quad -10$

$\frac{-2x}{-2} = \frac{0}{-2}$

$\boxed{x=0}$
