Fun Zone offers four party packages. The prices for each package are \$50 more on weekends than they are on weekdays, as shown in the given table.

Party Package Rates		
Package number	Weekend or weekday	Price
1	Weekend	\$160
1	Weekday	\$110
2	Weekend	\$180
2	Weekday	\$130
3	Weekend	\$230
3	Weekday	\$180
4	Weekend	\$300
4	Weekday	\$250

Which statement **best** describes the relation (package number, price)?

It is a function because there is a price given for every package.

It is not a function because each package number has two different prices.

It is a function because weekend packages are always \$50 more than weekday packages.

It is not a function because there are two different packages available for \$180.

Movies Plus charges its customers a \$10 monthly service fee plus \$2 for each movie the customer rents. Movies For Less charges \$3 for each movie but does not have a monthly service fee. The costs of renting movies during the same month is represented in the table.

Movie Rentals

Number of Movies	Movies Plus (Cost in \$)	Movies For Less (Cost in \$)
0	10	0
2	14	6
4	18	12
10	30	
15		

Which statement is true if 15 movies are rented from each company?

Each company charges the same amount.

Movies Plus costs \$6 more.

Movies For Less costs \$5 more. ✓

Movies Plus costs \$5 more.

Which problem can Akeem solve when he completes the table?

Akeem fills the tank of his car with gasoline. He completes the given table to show the distance he travels and the amount of gasoline left in the tank.

Distance Traveled and gas Left in Tank					
Distance Travelled (in miles)	0	20	60	100	?
Amount of Gas Left in Tank (in gallons)	12	11	9	7	0

The distance the car **will** travel over a certain **period** of time.

The cost of the gasoline needed to fill the tank.

The distance the car can travel on a full tank of gasoline. ✓

The amount of gasoline the car consumes each hour.

On the way to her babysitting job, Mary rode her bike for the first mile. She stopped at a traffic light and waited a few minutes for the traffic light to turn green. She then walked her bike across the street and up a short steep hill. Finally, she rode the bike at a constant speed for one more mile. If Mary created a graph of her time and distance, which statement describes the part of her graph that would show no change in distance?

Mary walked her bike across the avenue and up a short hill.

Mary rode her bike at a constant speed for one mile.

Mary stopped and waited for the traffic light to turn green. ✓

Mary used her bike to ride the first mile.
